

SolarZone Cold Steel Controlling Glare & Fade

Hanita Coatings

Building:
Residential

Description:
Luxury Home

Location City:
Duluth, Atlanta

Film Used:
Cold Steel 50

Size of Job:
525 square ft

Dealer/ Installer:
Solar Sensations, Inc., Steve Cobucci

Project Owner:
Sherry Tajuddin

CASE STUDY

PROJECT TASK:

Home owner Sherry Tajuddin was anxious to maintain the grandeur of her Georgian country house. She knew that by reducing the levels of UV radiation, she could help limit the fading and degradation of her home furnishings and wooden floors. But it was also important for her to preserve the lush woodland views, as well as the rustic elegance of the house exterior. Another problem facing the family was the sun's glare, which was making TV and computer viewing difficult.

SOLUTION:

Sherry contacted Steve Cobucci, from Solar Sensations Inc., who recommended the use of SolarZone **Cold Steel 50**. The film's solar filter would almost totally block harmful UV rays and reduce the glare, whilst preserving the view of the beautifully wooded backyard. "Like all SolarZone films, Cold Steel 50 provides an optical clarity that is unrivaled in the marketplace," stated Steve.

"This was a complicated job that required scaffolding," related Solar Sensations owner, Steve Cobucci. His crew had to carefully position the scaffolding so as not to damage the beautiful hardwood floors and wall interior.

RESULT:

"We are really pleased with the effect the film has on our windows," enthused Sherry, "There was so much glare in the living room before, that we had a very hard time watching television. It is amazing that such a light film can make such a big difference. I am also pleased that the window film will help protect the floor and furniture against fading. We are very happy and will recommend SolarZone films to our neighbors."
